

A position is available immediately in the area of chemical biology. The research entails the identification and characterization of protein targets of novel inhibitors of cell migration with potential as anti-cancer agents. A Ph.D. in biochemistry, chemistry or a related area and a strong research background is required. The ideal candidate would have experience in protein purification and analysis of protein-small molecule interactions. Salary is competitive and commensurate with experience. Please send a cover letter summarizing your qualifications, CV and three letters of reference to: Gabriel Fenteany, Department of Chemistry, University of Connecticut, Storrs, CT 06269-3060 (or by e-mail to: gabriel.fenteany@uconn.edu).
